

Internal Lab Programs

Set_1

1. Write a java program to read a number from the user and print whether it is positive or negative.
2. Write a java program to read two numbers and perform the arithmetic operations using methods.
3. Write a java program the given number Armstrong or not.

Set_2

1. Write a java program Take three numbers from the user and print the greatest number.
2. Program to solve quadratic equations (use if, else if and else).
3. Write a java program display Prime numbers between n to m.

Set_3

1. Program that keeps a number from the user and generates an integer between 1 and 7 and displays the name of the weekday.
2. Program that takes a year from user and print whether that year is a leap year or not.
3. Write a Java program to count the number of vowels, consonants, digits, and special characters in a string.

Set_4

1. Write a java Program to input 5 numbers from keyboard and find their sum and average.
2. Program in Java to display the multiplication table of a given integer.
3. Write a Java program to check whether a given string is a palindrome using the String class.

Set_5

1. Program that reads in two floating-point numbers and tests whether they are the same up to three decimal places.
2. Program to read two numbers and perform the arithmetic operations using methods.
3. Write a Java program to compare two strings lexicographically without using the compareTo() method.

Set_6

1. Design a class to overload a method compare() to return the greater of two as follows:
void compare(int, int)
void compare(char, char)
void compare(String, String)
2. Differentiate between static and non-static methods in java with example.
3. Write a java program to read a number from the user and print whether it is positive or negative.

Set_7

1. Illustrate the usage of 'this' and 'finalize' using a java program.
2. Write a java program to overload the constructors.
3. Program that takes a year from user and print whether that year is a leap year or not.

Set_8

- 1 Read the command line arguments and print the total number of arguments and its values.
- 2 Write a Java program that uses StringBuffer to reverse a string and display the output.
- 3 Write a java program sort the given array of elements in ascending order.

Set_9

- 1 Program to count the number of occurrences of a search string in a given text string.
- 2 Write a java program for matrices multiplication
- 3 Program in Java to display the multiplication table of a given integer.

Set_10

- 1 Program that keeps a number from the user and generates an integer between 1 and 7 and displays the name of the weekday.
- 2 Write a java program Swaping of two number without temp variable.
- 3 Write a java program for addition of two matrices

Internal Lab Programs

Set_1

1. Write a java program to read a number from the user and print whether it is positive or negative.
2. Write a java program to read two numbers and perform the arithmetic operations using methods.
3. Compare the Array List and Vector give an example.

Set_2

1. Write a java program Take three numbers from the user and print the greatest number.
2. Discuss about String Class and StringBuffer Class.
3. Write a java program display Prime numbers between n to m.

Set_3

1. Program that takes a year from user and print whether that year is a leap year or not.
2. Write a Java program to count the number of vowels, consonants, digits, and special characters in a string.
3. Write about Types of Inheritances and write program for Multilevel inheritance.

Set_4

1. Write a java Program to input 5 numbers from keyboard and find their sum and average.
2. Write a program for Multiple Interfaces.
3. Write a Java program to check whether a given string is a palindrome using the String class.

Set_5

1. Program that reads in two floating-point numbers and tests whether they are the same up to three decimal places.
2. Program to read two numbers and perform the arithmetic operations using methods.
3. How to achieve Multiple Inheritance using Interfaces give an example.

Set_6

1. Differentiate between static and non-static methods in java with example.
2. Write a java program to read a number from the user and print whether it is positive or negative.
3. Discuss about Packages and types of Packages.

Set_7

1. Illustrate the usage of 'this' and 'finalize' using a java program.
2. Write a java program to overload the constructors.
3. Write program for to achieve Method overriding concept.

Set_8

- 1 Write a Java program that uses StringBuffer to reverse a string and display the output.
- 2 Write a java program sort the given array of elements in ascending order.
- 3 Write a program for User defined Packages.

Set_9

- 1 Program to count the number of occurrences of a search string in a given text string.
- 2 What is Exception Handling give an example.
- 3 Write about Super keyword and Final Keyword give an example.

Set_10

- 1 Write a java program Swaping of two number without temp variable.
- 2 Write a java program for addition of two matrices.
- 3 Write a program for to achieve multiple Catch blocks in exception handling.
